To whom it may concern,

Recently we have faced the necessity to migrate over 50 databases from outdated Informix Servers to our new Oracle Server. The Ispirer migration solution emerged as the logical choice thanks to its wide capacities.

Using the Ispirer MnMTK we successfully converted over 12 TB of data contained within more than 3000 tables and several thousand stored procedures, views, functions and triggers containing around 200,000 lines of code. The Ispirer development team has been very prompt at answering questions and dealing with any issues we encountered. We are quite certain that the Ispirer MnMTK 2015 has saved us countless hours of manually converting all of the DDL information from all of our databases. The tool converted our data and schemas accurately and effectively.

Ispirer MnMTK was crucial to the successful completion of our database conversion project. We had tried several different strategies and tools previously and none of them compared to Ispirer MnMTK. It was definitely money well spent.

Thanks again,

Sam Clark, IT Manager  
Utah Dept of Technology Services
